Antar is a manufacturer and distributor of medical and orthopedic devices present on the market since 1998. We have our branch offices in 5 countries – Poland, Germany, Czech Rep., Slovakia and Belarus. Our experience from different markets encouraged us to create in 2012 our own production facility in Szydłowiec (Poland), where we combine Excellent Quality of European Made Products (our BLUE LINE PRODUCTS) with reasonable prices – comparable to prices offered by non-European suppliers. We produce orthopedic pillow made of memory foam, rollators, walkers and toilet chairs.

R.P14

Aresto-med deals in the trade of used, refurbished medical equipment. We buy equipment mainly from clinics and hospitals in the west. At our company's headquarters, we subject it to thorough inspections, possible repairs and regeneration, after which we sell it to countries around the world.

Our range is extremely wide: from infusion pumps to MRI scanners and from defibrillators to ultrasound machines. Due to the high quality standards and technical condition of the devices we sell, there is a great demand for our equipment both in the country and abroad. We comprehensively deal with transport, packaging, delivery and, if necessary, installation of purchased equipment in your facility.

Our offer:

- Patient monitors
- Operating tables
- Electrosurgical units
- Endoscopy systems
- Ultrasound machines
- Operating microscopes
- Surgical instruments
- Anesthesia machines and many more

Medicalgorithmics S.A. is a Polish company that develops advanced systems for cardiology. Innovation is one of its main advantages –it is present both in the organization of day-to-day work and in the development process. Thanks to a multidisciplinary group of researchers and developers, Medicalgorithmics markets ground-breaking technological solutions. We develop algorithms, software and devices which are then implemented for manufacturing. It lets us provide telemedicine services to patients around the world.

The Medicalgorithmics flagship product is **PocketECG** - the complete diagnostic solution for diagnosis of arrhythmia, provides full disclosure ECG Signal, complete data, analysis and comprehensive reporting. The PocketECG system makes more precise diagnosis possible, even in cases that may go undetected with offline monitoring like Holter and multi-week patch methods.

PocketECG recognizes each heart beat morphology in real time and enables remote monitoring of thousands of patients at the same time with an online view of a continuous full ECG signal record. This technology combines the accuracy of a full Holter analysis and the interactivity of hospital telemetry.
